Transcendence and Non-Naturalism in Early Chinese Thought 06 2020 Contemporary scholars of Chinese philosophy often presuppose that early China possessed a naturalistic worldview, devoid of any non-natural concepts, such as transcendence. Challenging this presupposition head-on, Joshua R. Brown and Alexus McLeod argue that non-naturalism and transcendence have a robust and significant place in early Chinese thought. This book reveals that non-naturalist positions can be found in early Chinese texts, in topics including conceptions of the divine, cosmogony, and philosophy. Moreover, by closely examining a range of early Chinese texts, and providing comparative readings of a number of Western texts and thinkers, the book offers a way of reading Chinese philosophy as consistent with the religious philosophy of the East and West, including the Abrahamic and the Brahmanistic religions. Co-written by a philosopher and theologian, this book offers unique insights into early Chinese thought, highlighting in particular new ways to consider a range of Chinese concepts, including tian, dao, li, and you/wu.

Introduction to Music Fundamentals and Lead-Sheet Terminology 2021 INTRODUCTION TO MUSIC FUNDAMENTALS AND LEAD-SHEET TERMINOLOGY is intended for the beginning student of music, commercial musician. This book assumes no technical knowledge of music and starts from the premise that the reader is either currently (or soon to be) involved in private music study or is a musician who teaches an instrument (or voice) or plans to become proficient through self instruction and practical experience. The concise format presented here offers an accelerated program that gets the musician up and running within a relatively short span of time. Chapters 1 through 9 provide a technical foundation for the survey of chord descriptions in Chapter 10. The opening chapters cover notes and rests, concepts in rhythm and meter, repeat signs, and performance directions. Chapters 2, 3, and 4 present the subjects of pitch, scale, and key signature. Intervals, the minor and major thirds, seventh chords follow in Chapters 5, 6, 7, and 9. Since a significant portion of commercial music and jazz involves scales and modes that are neither major nor minor, the topic of church modes is covered in Chapter 8. Chapter 10 outlines and analyzes the chord symbols typically represented in lead sheets. More than 220 music examples demonstrate the concepts presented in the text. 130 pages.

Terminology 2021 The aim of this volume is to provide an overview of different theoretical perspectives on Terminology, from Wüster to other initiatives that emerged since the beginning of the 1990s. The volume also covers important topics which have significantly influenced Terminology and its evolution. These include variation, multidimensionality, conceptual relations, and equivalence, among others. The twenty-two chapters of the volume, all written by acknowledged experts in the field, explore the questions that different approaches answer. They also describe the theoretical and methodological principles that were devised over the years to characterize, analyze, and represent terminological data. The semi-chronological thematic organization of chapters not only provides readers with a clear vision of the evolution of ideas in Terminology, but also gives them an understanding as to why some of these ideas were challenged. In addition to being accessible to readers unfamiliar with the basic theoretical principles in the field, the chapters provide a showcase of current research in the field, the challenges on the horizon, and finally future directions in terminological research. By bringing together work that is often disseminated in different forums and written in different languages, this volume offers a unique opportunity to look at how different theoretical approaches to Terminology offer complementary perspectives on terms, concepts and specialized knowledge, and help to further a deeper understanding of the complex phenomena that terminologists must successfully deal with in their work.

Dynamics and Terminology 18 2021 The urge to understand all aspects of human experience more and better seems to be one of the motives underlying cognitive development in many human existences. Understanding more and better is at the basis of knowledge creation and extension. One way of getting access to how understanding comes about and how knowledge is created, continuous dynamics of understanding and misunderstanding is by studying the cognitive potential and the development of natural language(s) and more particularly of terminology, in specific domains. In this volume on dynamics and terminology, thirteen contributors illustrate that human cognition is a dynamic process in a variety of socio-cognitive and cultural settings. The contributors encompass a panoply of methodologies and deal with subjects ranging from the dynamics of legal understanding in multilingual Europe, over financial, economic and scientific terminology in cultural and linguistic settings, to language policy issues in multilingual environments. All thirteen contributors link the dynamics of cognition to the creative potential of language as a repository of present experience in cultural settings and to the creation of neologisms in domain-specific languages. Attention is given to the functionality of indeterminacy, vagueness, polysemy, and synonymy, metaphor and phraseology. In this volume terminology is researched and discussed from an interdisciplinary perspective, combining insights developed over the last decades in the fields of terminology, socio-terminology, socio-cognitive terminology, cultural terminology, with tools and methods from cognitive linguistics, corpus linguistics, sociolinguistics, frame semantics, and knowledge engineering and statistics.
