distributed computing

wikipedia Sep 19 2021

distributed computing is a field of computer science that studies distributed systems a distributed system is a system whose components are located

on different networked computers which communicate and coordinate their actions by passing messages to one another from any system the components interact with one another in order to achieve a common goal

concurrent computing

wikipedia Jul 30 2022

concurrent computing is a form of computing in which several computations are executed concurrently during overlapping time periods instead of sequentially with one completing before the next starts this is a property of a system whether a program

computer or a network where there is a separate execution point or thread of control for each process

appropriate uses for sqlite Nov 02 2022 jan 20 2022

concurrency is also improved by database sharding using separate database files for different subdomains for example the server might have a separate sqlite database for each user so that the server can handle hundreds or thousands of simultaneous connections but each sqlite database is only used by one connection
