Geography, Art, Research Jul 08 2020 This book explores the intersection of geographical knowledge and artistic research in terms of both creative methods and practice-based research. In doing so it brings together geography's 'creative turn' with the art world's 'research turn.' Based on a decade and a half of ethnographic stories of working at the intersection of creative arts practices and geographical research, this book offers a much-needed critical account of these forms of knowledge production. Adopting a geohumanities approach to investigating how these forms of knowledge are produced, consumed, and circulated, it queries what imaginaries and practices of the key sites of knowledge making (including the field, the artist's studio, the PhD thesis, and the exhibition) emerge and how these might challenge existing understandings of these locations. Inspired by the geographies of science and knowledge, art history and theory, and accounts of working within and beyond disciplines, this book seeks to understand the geographies of research at the intersection of geography and creative arts practices, how these geographies challenge existing understandings of these disciplines and practices, and what they might contribute to our wider discussions of working beyond disciplines, including through artistic research. This book offers a timely contribution to the emerging fields of artistic research and geohumanities, and will appeal to undergraduate and postgraduate students and researchers.

Petrocultures Apr 04 2020 Contemporary life is founded on oil – a cheap, accessible, and rich source of energy that has shaped cities and manufacturing economies at the same time that it has increased mobility, global trade, and environmental devastation. Despite oil's essential role, full recognition of its social and cultural significance has only become a prominent feature of everyday debate and discussion in the early twenty-first century. Presenting a multifaceted analysis of the cultural, social, and political claims and assumptions that guide how we think and talk about oil, Petrocultures maps the complex and often contradictory ways in which oil has influenced the public's imagination around the world. This collection of essays shows that oil's vast network of social and historical narratives and the processes that enable its extraction are what characterize its importance, and that its circulation through this immense web of relations forms worldwide experiences and expectations. Contributors' essays investigate the discourses surrounding oil in contemporary culture while advancing and configuring new ways to discuss the cultural ecosystem that it has created. A window into the social role of oil, Petrocultures also contemplates what it would mean if human life were no longer deeply shaped by the consumption of fossil fuels.

Essential Oils Apr 16 2021 Essential Oils: Contact Allergy and Chemical Composition provides a full review of contact allergy to essential oils along with detailed analyses of the chemical composition of essential oils known to cause contact allergy. In addition to literature data, this

book presents the results of nearly 6,400 previously unpublished sample analyses, by far the largest set of essential oils analyses ever reported in a single source of scientific literature. Covering 91 essential oils and two absolutes, the book presents an alphabetical list of all 4,350 ingredients that have been identified in them, a list of chemicals known to cause contact allergy and allergic contact dermatitis, and tabular indications of the ingredients that can be found in each essential oil. The book discusses contact allergy and allergic contact dermatitis for each of the oils and absolutes, sometimes able to provide only one or two reports but drawing upon considerable amounts of literature in other cases, such as with tea tree oil, ylang-ylang oil, lavender oil, rose oil, turpentine oil, jasmine absolute, and sandalwood oil. While limited information on the main components and their concentrations would be enough for most dermatologists, this book gives extensive coverage not only to improve levels of medical knowledge and quality of patient care, but also for the benefit of professionals beyond clinical study and practice, such as chemists in the perfume and cosmetics industries, perfumers, academic scientists working with essential oils and fragrances, aromatherapists, legislators, and those involved in the production, sale, and acquisition of essential oils.

Eco-Aesthetics Jan 02 2020 By moving beyond traditional aesthetic categories (beauty, the sublime, the religious), Eco-Aesthetics takes an inter-disciplinary approach bridging the arts, humanities and social sciences and explores what aesthetics might mean in the 21st century. It is one in a series of new, radical aesthetics promoting debate, confronting convention and formulating alternative ways of thinking about art practice. There is no doubt that the social and environmental spheres are interconnected but can art and artists really make a difference to the global environmental crisis? Can art practice meaningfully contribute to the development of sustainable lifestyles? Malcolm Miles explores the strands of eco-art, eco-aesthetics and contemporary aesthetic theories, offering timely critiques of consumerism and globalisation and, ultimately, offers a possible formulation of an engaged eco-aesthetic for the early 21st century.

The Chinese Corporate Ecosystem Oct 30 2019 Challenging simplistic claims that Chinese corporations merely serve Communist Party goals, this book argues we cannot understand these corporations without tracing their dynamic evolution within a unique socio-political ecosystem. Vivid case studies illuminate the strange hybrid structures and networks that are essential for corporate success in the Chinese habitat. Tracing the reciprocal impacts between Chinese corporations and their environment, Colin S. C. Hawes reveals how corporations' political adaptations have raised serious obstacles for their international expansion and worsened China's environmental crisis. Adopting an interdisciplinary approach that synthesizes insights from behavioural economics, science and Chinese philosophy, this book proposes innovative solutions to the damaging impacts of Chinese corporations. It makes a compelling case for redirecting the vital energy of corporations and government officials in more productive and sustainable directions.

Living Audaciously Jun 06 2020 During the early Renaissance period (14th to 16th century AD), artists were at the forefront of redefining every aspect of human development, marking an unprecedented shift for human civilisation. Their paintings were a clear break from the past in portraying Biblical stories. The Old Masters portrayed human predicament with unmatched intensity. Their subjects were endowed with movement, dynamism and emotion never before seen in earlier paintings. Do Renaissance artists have a message for us today? How do we live differently in the light of their message? These questions are the starting point for the author as he interprets the paintings in today's context. The book contains 30 paintings most of them from the Renaissance period. Every one of these paintings provides an important reflection that challenges you to live to the full and to live audaciously.

Analytical Methods in Petroleum Upstream Applications explores advances in the analytical methods and instrument

Climate and Capital in the Age of Petroleum Aug 09 2020 Jeff Diamanti describes the destructive relationship between climate and capital through the exponential growth of the petroleum industry over the last 40 years. Building on key insights in the environmental and energy humanities, Diamanti introduces the concept of the 'terminal landscape' as a site of storage, transformation and transition, essential to critical ecology in the 21st century. Climate and Capital in the Age of Petroleum presents these scenes of transformation as sites through which post-industrial capitalism distributes fossil fuels into the world. Diamanti uses this concept to redefine the post-industrial landscape by revealing the global flows of exchange and storage that precede the distribution of fossil fuels into the world as social form. Advancing a new media theory of energy, fossil fuels and other finite resources become new types of distributable media. Through this line of thinking, the book makes solid connections between media technologies and energy cultures that help to shape a radical critique of the current energy infrastructure that characterises global capitalism. Arguing that this infrastructure rests on millennia of compact matter, centuries of colonial violence, and decades of technological development, Diamanti's analysis deepens our understanding of the environment as a 'terminal landscape' through case studies of oil companies, countries, artworks, and historical events. Using his under-examined typology of global energy further theorises and politicises the climate crisis for scholars and activists alike.

Natural Diversity in the New Millennium Dec 13 2020 Natural diversity has been extensively used to understand plant biology and improve crops. However, studies were commonly based on visual phenotypes or on a few measurable parameters. Nowadays, a large number of parameters can be measured thanks to next generation sequencing, metabolomics, proteomics, and transcriptomics thus providing an unprecedented resolution in the detection of natural diversity. This enhanced resolution offers new possibilities in terms of understanding plant biology. Technology advances also contribute to a better assessment of the biodiversity loss currently taking place. Hence, the topic presents an overview on efforts for maintaining biological diversity in crops, on possibilities offered by recent technologies in the assessment of natural variation, and ends with examples of the diversity found even at the cellular level.

Costly Fix Jun 30 2022 Costly Fix examines the post-1995 Alberta tar sands boom, detailing how the state inflated the profitability of the tar sands and turned a blind eye to environmental issues. It considers the position of First Nations, the character and strength of environmental

critiques, and the difficulties that environmental groups and First Nations have had in establishing a countermovement to market fundamentalism. The final chapter discusses how Alberta's new NDP government, in its first couple of years, has addressed the legacies they have inherited from the previous Progressive Conservative government on climate change, royalties, and the blight of tailings ponds in the boreal forest. Throughout the book, Urquhart demonstrates that too many actors have done too little to prevent Alberta's boreal forest from becoming a landscape sacrificed for unsustainable economic growth.

Rethinking Information Literacy Feb 12 2021 A vision for the future of information literacy teaching. Based on groundbreaking research, undertaken by the authors as part of the prestigious Arcadia Programme at Cambridge University, this book presents a new and dynamic information literacy curriculum developed for the 21st century information professional. The authors adopt a broad definition of information literacy (IL) that encompasses social as well as academic environments and situates IL as a fundamental attribute of the discerning scholar and the informed citizen. It seeks to address in a modular, flexible and holistic way the developing information needs of students entering higher education over the next five years. The book is organized around the ten strands of the new curriculum, which cover the whole landscape of information literacy development required to succeed as an undergraduate in higher education. Interweaving the authors' research and the reflections of internationally recognized experts from the library, education and information literacy sectors, including Moira Bent, Andy Priestner, Sarah Pavey, Geoff Walton and Elizabeth Tilley, it illustrates how and why this new curriculum will work in practice. Detailed appendices present the curriculum, lesson plans and tools for institutional audit, giving readers all the tools they need to implement it successfully in their institutions.

Essays on 20th Century Latin American Art May 06 2020 *Essays on 20th Century Latin American Art* provides a broad synthesis of the subject through short chapters illustrated with reproductions of iconic works by artists who have made significant contributions to art and society. Designed as a teaching tool for non-art historians, the book's purpose is to introduce these important artists within a new scholarly context and recognize their accomplishments with those of others beyond the Americas and the Caribbean. The publication provides an in-depth analysis of topics such as political issues in Latin American art and art and popular culture, introducing views on artists and art-related issues that have rarely been addressed. Organized both regionally and thematically, it takes a unique approach to the exploration of art in the Americas, beginning with discussions of Modernism and Abstraction, followed by a chapter on art and politics from the 1960s to the 1980s. The author covers Spanish-speaking Central America and the Caribbean, regions not usually addressed in Latin American art history surveys. The chapter on Carnival as an expression of popular culture is a particularly valuable addition. This book will be of interest to students and scholars of Latin American history, culture, art, international relations, gender studies, and sociology, as well as Caribbean studies.

Practical Petroleum Geochemistry for Exploration and Production Sep 02 2022 *Practical Petroleum Geochemistry for Exploration and Production* provides readers with a single reference that addresses the principle concepts and applications of petroleum geochemistry used in finding, evaluating, and producing petroleum deposits. Today, there are few reference books available on how petroleum geochemistry is applied in exploration and production written specifically for geologists, geophysicists, and petroleum engineers. This book fills that void and is based on training courses that the author has developed over his 37-year career in hydrocarbon exploration and production. Specific topical features include the origin of petroleum, deposition of source rock, hydrocarbon generation, and oil and gas migrations that lead to petroleum accumulations. Also included are descriptions on how these concepts are applied to source rock evaluation, oil-to-oil, and oil-to-source rock correlations, and ways of interpreting natural gas data in exploration work. Finally, a thorough description on the ways petroleum geochemistry can assist in development and production work, including reservoir continuity, production allocation, and EOR monitoring is presented. Authored by an expert in petroleum geochemistry, this book is the ideal reference for any geoscientist looking for exploration and production content based on extensive field-based research and expertise. Emphasizes the practical application of geochemistry in solving exploration and production problems Features more than 200 illustrations, tables, and diagrams to underscore key concepts Authored by an expert geochemist that has nearly 40 years of experience in field-based research, applications, and instruction Serves as a refresher reference for geochemistry specialists and non-specialists alike

Advances in Carbon Management Technologies Dec 01 2019 Volume 2 of *Advances in Carbon Management Technologies* has 21 chapters. It presents the introductory chapter again, for framing the challenges that confront the proposed solutions discussed in this volume. Section 4 presents various ways biomass and biomass wastes can be manipulated to provide a low-carbon footprint of the generation of power, heat and co-products, and of recovery and reuse of biomass wastes for beneficial purposes. Section 5 provides potential carbon management solutions in urban and manufacturing environments. This section also provides state-of-the-art of battery technologies for the transportation sector. The chapters in section 6 deals with electricity and the grid, and how decarbonization can be practiced in the electricity sector. The overall topic of advances in carbon management is too broad to be covered in a book of this size. It was not intended to cover every possible aspect that is relevant to the topic. Attempts were made, however, to highlight the most important issues of decarbonization from technological viewpoints. Over the years carbon intensity of products and processes has decreased, but the proportion of energy derived from fossil fuels has been stubbornly stuck at about 80%. This has occurred despite very rapid development of renewable fuels, because at the same time the use of fossil fuels has also increased. Thus, the challenges are truly daunting. It is hoped that the technology choices provided here will show the myriad ways that solutions will evolve. While policy decisions are the driving forces for technology development, the book was not designed to cover policy solutions.

Fuel Processing and Energy Utilization Feb 01 2020 This book provides different aspects on fuel processing and refinery for energy generation. Chemtrails, HAARP, and the Full Spectrum Dominance of Planet Earth Jul 20 2021 We are entering a Space Age, but not the kind President Kennedy originally envisioned. This Space Age is replacing resource wars and redefines planet earth as a "battlespace" in accordance with the military doctrine of "Full-Spectrum Dominance." This book examines how chemtrails and ionospheric heaters like the High-frequency Active Auroral Research Project (HAARP) in Alaska services a full-spectrum dominance. This "Revolution in Military Affairs" needs an atmospheric

medium to assure wireless access to the bodies and brains of anyone on Earth—from heat-seeking missiles to a form of mind control. How sinister are these technologies? Are we being prepared for a "global village" lockdown? The recent release of NSA records have reminded Americans that "eyes in the sky" are tracking us as supercomputers record the phone calls, e-mails, internet posts, and even the brain frequencies of millions. Elana M. Freeland's startling book sifts through the confusion surrounding chemtrails-versus-contrails and how extreme weather is being "geo-engineered" to enrich disaster capitalists and intimidate nations. A deconstruction of Bernard J. Eastlund's HAARP patent points to other covert agendas, such as a global Smart Grid infrastructure that enables access to every body and brain on Earth, a "Transhumanist" future that erases lines between human and machine, and Nanobiological hybrids armed with microprocessors that infest and harm human bodies.

Groundswell Jun 26 2019 From the bestselling author of *Ethical Oil* comes a provocative exploration of the shale gas rush. Levant explains what fracking is and explores what its enemies do not want you to know and why it has the potential to change our future. In *Groundswell*, Ezra Levant examines the fracking revolution. Fracking (from "fracturing") involves injecting millions of gallons of water mixed with sand and chemicals into a well deep underground to fracture shale rock and release previously inaccessible reserves of oil and gas. The United States, Canada, North Africa, and the Middle East have vast reserves of shale gas and accessing it will mean a seismic shift in energy geopolitics. With natural gas in abundance, prices fall and the stranglehold by energy companies like Russia's Gazprom loosens. OPEC, environmentalists, and communities throughout North America are fighting hard to stop fracking, and Levant debunks their motivations and arguments, while arguing that fracking's benefits outweigh its costs, even environmentally. With *Ethical Oil*, Levant completely changed the debate surrounding Canada's oil sands. In this timely and controversial book he provides desperately needed perspective on a subject of growing global importance.

Oil's Deep State Nov 23 2021 Why have democratic governments failed to take serious steps to reduce carbon emissions despite dire warnings and compelling evidence of the profound and growing threat posed by global warming? Most of the writing on global warming is by scientists, academics, environmentalists, and journalists. Kevin Taft, a former leader of the opposition in Alberta, brings a fresh perspective through the insight he gained as an elected politician who had an insider's eyewitness view of the role of the oil industry. His answer, in brief: The oil industry has captured key democratic institutions in both Alberta and Ottawa. Taft begins his book with a perceptive observer's account of a recent court case in Ottawa which laid bare the tactics and techniques of the industry, its insiders and lobbyists. He casts dramatic new light on exactly how corporate lobbyists, politicians, bureaucrats, universities, and other organizations are working together to pursue the oil industry's agenda. He offers a brisk tour of the recent work of scholars who have developed the concepts of the deep state and institutional capture to understand how one rich industry can override the public interest. Taft views global warming and weakened democracy as two symptoms of the same problem — the loss of democratic institutions to corporate influence and control. He sees citizen engagement and direct action by the public as the only response that can unravel big oil's deep state.

Fracking: A Reference Handbook Sep 21 2021 The use of fracking is a tremendously important technology for the recovery of oil and gas, but the advantages and costs of fracking remain controversial. This book examines the issues and social, economic, political, and legal aspects of fracking in the United States. • Provides readers with a complete historical review of the origins, development, and expansion of the use of fracking • Explains the technical principles related to the use of fracking in clear, nontechnical language • Presents an unbiased review of the arguments for and against the use of fracking for the recovery of oil and gas • Supplies a summary of the history of the use of fracking in the United States
