Humanitarian Logistics Jul 01 2020 Humanitarian logistics has received increasing interest both from logistics academics and practitioners as a result of the dramatic increase in both natural and man-made disasters. The impact on affected populations can be all the more limited as much as the logistics operations in response to emergencies are effective and efficient. Collaboration with various relevant actors involving in the emergency resolution can help to reduce costs, increase speed, and improve the leanness/agility level in the humanitarian supply chain, and viceversa, poor coordination among them is cited as an explanation for performance gaps. As disasters become increasingly complex better collaboration not only with government agencies, military units, humanitarian organizations, but also through partnerships with private business becomes more and more important. However, such partnerships are not easy as organizations in the two sectors are extremely different. The main aim of this study is exploring more in depth the partnership between profit and non-profit in emergency relief operations, with a specific attention to the cross-learning potential for both the logistics service provider (profit) and the humanitarian organization (non-profit).

Operational Logistics Aug 14 2021 *Operational Logistics: The Art and Science of Sustaining Military Operations* explores military logistics in terms of the theoretical foundations of operational logistics (OpLog) and its applications. The theoretical foundations are examined with regard to two dimensions. First, the artistic or qualitative aspects of contemporary logistics are looked at in the context of the operational level of war. These OpLog aspects include principles, imperatives and tenets, which are stated and analyzed. The second dimension relates to the scientific aspects of logistics. It is manifested by a formal network model that represents the structural and operational features of an OpLog system. Hence the book examines both artistic and scientific dimensions of military logistics and integrates the respective qualitative and quantitative aspects into a unified and definitive presentation of operational logistics. Chapter 1 presents a general introduction to military logistics. Chapter 2 discusses the general structure and characteristics of logistics and describes its three levels - strategic, operational and tactical. Chapter 3 focuses on Operational Logistics (OpLog). Chapter 4 deals with the logistics planning process. Chapter 5 addresses the issue of logistics information. Chapter 6 deals with forecasting logistics demands. Chapter 7 introduces the first version of the logistics network model. Chapter 8 addresses an important property of an OpLog system - Flexibility. Chapter 9 discusses two major (and dual) issues in OpLog practice: force accumulation and medical treatment and evacuation. Chapter 10 presents an inter-temporal network optimization model that is designed to determine deployment and employment of the support chain in an OpLog system.
