Wikis Jul 19 2021 Wikis as information sources, as a form of publishing, and as tools for collaboration, are discussed in this book.

The applications of wikis in library and information services, education and business are explored, with examples. Provides an overview of wikis, in the context of the increasing use of 'social software' and the trend towards a more interactive World Wide Web. The different kinds of wikis are identified and described. The advantages and problems associated with using wikis in information work and collaboration are discussed. One of the problems is simply that of finding wikis that deal with a particular topic or activity, and this is addressed through a discussion of directories, search engines and other finding tools. Later chapters cover the options for creating wikis and the management of a wiki. The book concludes with lists of resources related to wikis. No other book currently available, addresses this highly topical subject Wikis are becoming important sources of information on the web yet they are little understood by librarians or the general public Although wikis can be useful sources of information, Internet users need to know how wikis operate if they are to be able to evaluate the information in a wiki

Wiki Oct 10 2020 A book about wikis! That's what people need. Because with wiki technology, lots of people can freely work - gether – they can even generate very large works in the intellectual realm. See for yourself: Today, we still marvel at our massive church buildings,

each c- structed over a period of centuries, requiring an immense amount of labor and often bearing the cultural stamp of all of the epochs during which it was created. Someone just has to begin by placing stone upon stone and motivate the people nearby to help out a bit. In places where such enthusiastic fellow men and women lend a hand and donate materials, great things can emerge. And where they are absent? Either scant ruins remain, or the iron will of a pharaoh is - quired, an army of drivers, the sweat of a people and a mountain of gold. Great things can also be created in that way – take the Py- mids: a clear concept, no blending of styles, pure will. Those are two very different paths. The one entails passionate people devotedly building something together for the common good; the other: a single will manages a variety of resources to achieve a set goal. Wikis are tools with which lots of people with a minimum of - ganization, planning, money and time can create something together and communicate with each other from several scattered computers or over the Internet.
