In Our Other Lives Apr 10 2021 A provocative novel about abandoned faith, heartbreaking loss, and inescapable government scrutiny in the heartland of a post-9/11 nation. American missionary and ROTC cadet Tyler Ahls, long missing in Pakistan, has just surfaced, proselytizing in an Afghani terrorist propaganda video. For Omaha nurse Elisabeth Holland, it's a shock that her brother is even alive. Now she must ask herself a more grave question: Is he a hostage or a traitor? Seasoned FBI special agent Frank Schwaller is asking this too. He's come to Nebraska armed with countless hours of video, audio, and email surveillance. The object of his unyielding gaze is Elisabeth. But the more Schwaller uncovers about her--from her and Tyler's evangelical Christian upbringing to her shattered youthful dreams to her broken marriage to a drifter--the more mystifying Elisabeth and the two men in her life become. To find out the truth about these entwined lives-- and the desperation that comes from love, fear, and the need to disappear--Agent Schwaller will discover how even the most lonesome corners of the Plains can be darkened by the long shadow of war. From Kings of Broken Things author Theodore Wheeler comes an exploration of love lost, the failure of humanism, and the revelations of how deeply the US government spies on the personal lives of its citizens.

Perspectives on the Department of Defense Global Emerging Infections Surveillance and Response System May 11 2021 Perspectives on the Department of Defense Global Emerging Infections Surveillance and Response System: A Program Review describes the capacity, quality, and effectiveness of the international and domestic facilities and programs that are a part of a DoD system to monitor and address emerging infectious diseases globally. The committee concludes that the goals of the system are in U.S. military, U.S. civilian, and global public health interests and that substantial progress has been made toward achieving system goals.

Cyber Reconnaissance, Surveillance and Defense Oct 28 2022 At a time when online surveillance and cybercrime techniques are widespread, and are being used by governments, corporations, and individuals, Cyber Reconnaissance, Surveillance and Defense gives you a practical resource that explains how these activities are being carried out and shows how to defend against them. Expert author Rob Shimonski shows you how to carry out advanced IT surveillance and reconnaissance, describes when and how these techniques are used, and provides a full legal background for each threat. To help you understand how to defend against these attacks, this book describes many new and leading-edge surveillance, information-gathering, and personal exploitation threats taking place today, including Web cam breaches, home privacy systems, physical and logical tracking, phone tracking, picture metadata, physical device tracking and geo-location, social media security, identity theft, social engineering, sniffing, and more. Understand how IT surveillance and reconnaissance techniques are being used to track and monitor activities of individuals and organizations Find out about the legal basis of these attacks and threats — what is legal and what is not — and how to defend against any type of surveillance Learn how to

thwart monitoring and surveillance threats with practical tools and techniques Real-world examples teach using key concepts from cases in the news around the world

The Tools of Owatatsumi Feb 26 2020 Japan is quintessentially by geography a maritime country. Maritime surveillance capabilities –

underwater, shore-based and airborne – are critical to its national defence posture. This book describes and assesses these capabilities, with particular respect to the underwater segment, about which there is little strategic analysis in publicly available literature. Since the end of the Cold War, Chinese oceanographic and navy vessels have intruded into Japanese waters with increasing frequency, not counting their activities in disputed waters such as around the Senkaku (Diaoyu) Islands and Okinotorishima where China and Japan have overlapping territorial claims. These intrusions have increasingly involved warships, including submarines, sometimes acting quite aggressively. Japan maintains an extraordinary network of undersea hydrophone arrays, connected to shore-stations which are typically equipped with electronic intelligence (ELINT) systems, for monitoring, identifying and tracking submarine and surface traffic in its internal straits and surrounding seas. Some parts of this

network are operated jointly with, and are of crucial importance to, the US Navy. Japan's superlative submarine detection capabilities would be of decisive advantage in any submarine engagement. But the relevant facilities are relatively vulnerable, which makes them very lucrative targets in any conflict. This introduces compelling escalatory dynamics, including the involvement of US forces and possible employment of nuclear options.

Practical Applications of Advanced Technologies for Enhancing Security and Defense Capabilities: Perspectives and Challenges for the Western Balkans Sep 22 2019 Recent technological advances have transformed the sectors of security and defense. While creating challenges for NATO and its partner countries, this has also led to opportunities. Technology has facilitated the emergence of new and unprecedented threats, as terrorists and other non-NATO state actors utilize new technologies to exploit personal data, gather and misuse information and devise new methods. On the other hand, AI technology in particular has the potential to detect cyber intrusions, predict terrorist acts and contribute to the development of better surveillance and reconnaissance systems and more effective responses. It is therefore of vital importance that NATO and its partners keep their knowledge of these modern technologies up to date. This book presents papers from the NATO Advanced Research Workshop (ARW) entitled: Practical Applications of Advanced Technologies for Enhancing Security and Defense Capabilities: Perspectives and Challenges for the Western Balkans, held online from 14 to 21 October 2021. The main objective of the ARW was to explore the application of advanced technology for security and defense purposes and explore the development of strategies for regional cooperation between public, academic and private actors. The book also covers the legal, technical and ethical challenges which can

emerge in the deployment of AI and other advanced technologies in the defense and security sectors. The book will be of interest to all those seeking a better understanding of the technical aspects of the threat environment and responses in the region and wishing to explore the use of AI and other advanced technologies in counter terrorism.

Security, Defense Discourse and Identity in NATO and Europe Apr 22 2022 Analyzing changes in the role and place of NATO, European integration, and Franco-American relations in foreign policy discourse under Presidents Jacques Chirac and Nicolas Sarkozy, this book provides an original perspective on French foreign policy and its identity construction. The book employs a novel research design for the analysis of foreign policies, which can be used beyond the case of France, by combining the discourse theory of the Essex School with Interpretive Policy Analysis to examine political ideas and how they are organized into a foreign policy identity. On these grounds, the volume undertakes a comparative analysis of parliamentary and executive discourse of President Chirac's failed attempt at NATO reintegration in the 1990s, Sarkozy's successful attempt in the 2000s, and the Libyan War. Ostermann depicts French foreign policy and identity as turning away from the European Union, atlanticizing, and losing its American nemesis. As a result, France uses a much more pragmatic, de-unionized, and pro-American strategy to implement foreign policy objectives than before. Offering a new and innovative explanation for a major change in French foreign policy and grand strategy, this book will be of great interest to scholars of NATO, European defense cooperation, and foreign policy.

Intelligence, Surveillance and Reconnaissance
Aug 26 2022 Increasing calls for intelligence
support and continuing innovations in
intelligence technologies combine to create
significant challenges for both the executive and
legislative branches. Intelligence, Surveillance,
and Reconnaissance (ISR) systems are integral
components of both national policy-making and
military operations, including counter-terrorism
operations, but they are costly and complicated
and they must be linked in order to provide
users with a comprehensive understanding of
issues based on information from all sources.
These complications have meant that even
though many effective systems have been
fielded, there have also been lengthy delays and
massive cost overruns. This book explores the
uncertainties about the long-term acquisition
plans for ISR systems that persist even as
pressures continue for increasing the availability
of ISR systems in current and future military
operations and for national policy-making.
Insanity Defense Sep 27 2022 An insider's
account of America's ineffectual approach to
some of the hardest defense and intelligence
issues in the three decades since the Cold War
ended. Insanity can be defined as doing the
same thing over and over again but expecting a
different result. As a nation, America has cycled
through the same defense and intelligence
issues since the end of the Cold War. In Insanity
Defense, Congresswoman Jane Harman
chronicles how four administrations have failed
to confront some of the toughest national
security policy issues and suggests achievable
fixes that can move us toward a safer future. The
reasons for these inadequacies are varied and
complex, in some cases going back generations.
American leaders didn't realize soon enough that
the institutions and habits formed during the
Cold War were no longer effective in an
increasingly multi-power world transformed by
digital technology and riven by ethno-sectarian

conflict. Nations freed from the fear of the Soviets no longer deferred to America as before. Yet the United States settled into a comfortable, at times arrogant, position as the lone superpower. At the same time our governing institutions, which had stayed resilient, however imperfectly, through multiple crises, began their own unraveling. Congresswoman Harman was there—as witness, legislator, exhorter, enabler, dissident and, eventually, outside advisor and commentator. Insanity Defense is an insider's account of decades of American national security—of its failures and omissions—and a roadmap to making significant progress on solving these perennially difficult issues.

Developments and Advances in Defense and Security Jul 13 2021 This book gathers the proceedings of the Multidisciplinary International Conference of Research Applied to Defense and Security (MICRADS), held at the Eloy Alfaro Military Academy (ESMIL) in Quito, Ecuador, on May 13-15,2020. It covers a broad range of topics in systems, communication, and defense; strategy and political–administrative vision in defense; and engineering and technologies applied to defense. Given its scope, it offers a valuable resource for practitioners, researchers, and students alike.

Developments and Advances in Defense and Security Aug 14 2021 This book includes a selection of articles from The 2018 Multidisciplinary International Conference of Research Applied to Defense and Security (MICRADS'18), held in Salinas, Peninsula de Santa Elena, Ecuador, from April 18 to 20, 2018. MICRADS is an international forum for researchers and practitioners to present and discuss the most recent innovations, trends, results, experiences and concerns in the various areas of defense and security, together with their technological development and applications. The main topics covered are: Information and Communication Technology in Education; Computer Vision in Military

Applications; Engineering Analysis and Signal Processing; Cybersecurity and Cyberdefense; Maritime Security and Safety; Strategy, Geopolitics and Oceanopolitics; Defense planning; Leadership (e-leadership); Defense Economics; Defense Logistics; Health Informatics in Military Applications; Simulation in Military Applications; Computer Networks, Mobility and Pervasive Systems; Military Marketing; Military Physical Training; Assistive Devices and Wearable Technology; Naval and Military Engineering; Weapons and Combat Systems; Operational Oceanography. The book is aimed at all those dealing with defense and security issues, including practitioners, researchers and teachers as well as undergraduate, graduate, master's and doctorate students.

Occupational Medical Examinations and Surveillance Manual (DoD 6055. 05-M) (Incorporating Change 1, September 2008) Apr 29 2020 This Manual, "Occupational Medical Examinations and Surveillance Manual," is issued in accordance with the authority of DoD Instruction (DoDI) 6055.5 (Reference (a)). It provides health professionals with information and references appropriate for developing and conducting occupational medical examinations and surveillance prescribed in Reference (a) by identifying the known health risks associated with specific jobs, processes, and exposures. DoD 6055.5-M, "Occupational Medical Surveillance Manual," May 4, 1998, (Reference (b)) is hereby canceled. This Manual applies to the Office of the Secretary of Defense, the Military Departments, the Chairman of the Joint Chiefs of Staff, the Combatant Commands, the Office of the Inspector General of the Department of Defense, the Defense Agencies, the DoD Field Activities, and all other organizational entities in the Department of Defense ("DoD Components"). This Manual is effective immediately and is mandatory for use by all the DoD Components in developing,

performing, interpreting the results of, and conducting population-based surveillance with the results of occupational medical examinations. Data collected through environmental sampling and individual surveillance should be entered into appropriate electronic data systems, as available.

Adjusting to a New Security Environment Jan 07 2021

European Union Security and Defence Nov 05 2020 This book explores the multilayer nexus among inter-related international and regional security parameters that critically define the EU's rapidly changing security environment. In terms of intensity, complexity and urgency these changes constitute challenges that threaten the very core of European security – both internal and external. In a fluid and transitional international environment of diversified needs and polymorphic threats the space dimension acquires a novel unified meaning. The book closely examines the EU's current strategic, organisational and defence capabilities regarding global, regional and domestic challenges such as terrorism, systemic instability, global order and a number of crucial hindrances to transatlantic cooperation. The chapters offer not only valuable theoretical insights, but also unique perspectives on operational and organisational elements of EU applied policies based on the testimonies of field experts. The combination of theory-based approaches and the demonstration of the EU's operational capabilities and weaknesses as externalized through its global strategy choices provide an overall evaluation of adopted policies and their effects. This is crucial in a global transition period that will define the EU's role and its potential to produce desired outcomes through synergies with its strategic allies.

The EU Common Security and Defence Policy Jul 01 2020 Presenting the first analytical

overview of the legal foundations of the EU's Common Security and Defence Policy (CSDP), this book provides a detailed examination of the law and practice of the EU's security policy. The European Union's security and defence policy has long been the focus of political scientists and international relations experts. However, it has more recently become of increasing relevance to lawyers too. Since the early 2000s, the EU has carried out more than two dozen security and defence missions in Europe, Africa, and Asia. The EU institutions are keen to stress the security dimension of other external policies also, such as development cooperation, and the Lisbon Treaty introduces a more detailed set of rules and procedures which govern the CSDP. This book provides a legal analysis of the Union's CSDP by examining the nexus of its substantive, institutional, and economic dimensions. Taking as its starting point the historical development of security and defence in the context of European integration, it outlines the legal framework created by the rules and procedures introduced by the Treaty of Lisbon. It examines the military operations and civilian missions undertaken by the Union, and looks at the policy context within which they are carried out. It analyses the international agreements concluded in this field and explores the links between the CSDP and other external policies of the Union.

Distorting Defense Sep 03 2020 Using journalists' own standards as the measure, an exhaustive analysis of nearly 3000 network news reports from the Reagan, Bush, and Clinton administrations reveals that the networks may do more to misinform than inform on a whole range of complex issues related to national defense. This study paints a disturbing picture of the inadequate coverage ABC World News Tonight, CBS Evening News, and NBC Nightly News provide to millions of viewers each night. Aubin concludes that network coverage of defense issues was too often tainted by

preconceived attitudes and lapses in journalistic standards. While as much as twenty-five cents of every dollar went to the defense budget during some of the periods reviewed, the networks hardly covered the key issues surrounding the Reagan defense buildup or the dramatic cuts that followed the end of the Cold War. In addition to their inadequate coverage, the networks also deprived Americans of balanced coverage of the investments made in high-tech weapons that ultimately prevailed in the Gulf War. Though the networks receive good marks for foreign policy coverage, they need to improve the quality of defense reports. This book provides them with the lessons and prescriptions for doing so, and it serves as a primer for all Americans who want to know just what it was that the networks failed to tell them.

National Security Space Defense and Protection Jun 19 2019 It is not yet 60 years since the first artificial satellite was placed into Earth orbit. In just over a half century, mankind has gone from no presence in outer space to a condition of high dependence on orbiting satellites. These sensors, receivers, transmitters, and other such devices, as well as the satellites that carry them, are components of complex space systems that include terrestrial elements, electronic links between and among components, organizations to provide the management, care and feeding, and launch systems that put satellites into orbit. In many instances, these space systems connect with and otherwise interact with terrestrial systems; for example, a very long list of Earth-based systems cannot function properly without information from the Global Positioning System (GPS). Space systems are fundamental to the information business, and the modern world is an information-driven one. In addition to navigation (and associated timing), space systems provide communications and imagery and other Earth-sensing functions. Among these systems are

many that support military, intelligence, and other national security functions of the United States and many other nations. Some of these are unique government, national security systems; however, functions to support national security are also provided by commercial and civil-government space systems. â€¨The importance of space systems to the United States and its allies and potential adversaries raises major policy issues. National Security Space Defense and Protection reviews the range of options available to address threats to space systems, in terms of deterring hostile actions, defeating hostile actions, and surviving hostile actions, and assesses potential strategies and plans to counter such threats. This report recommends architectures, capabilities, and courses of action to address such threats and actions to address affordability, technology risk, and other potential barriers or limiting factors in implementing such courses of action.

Applied Cryptography for Cyber Security and Defense: Information Encryption and Cyphering Oct 04 2020 Applied Cryptography for Cyber Security and Defense: Information Encryption and Cyphering applies the principles of cryptographic systems to real-world scenarios, explaining how cryptography can protect businesses' information and ensure privacy for their networks and databases. It delves into the specific security requirements within various emerging application areas and discusses procedures for engineering cryptography into system design and implementation.

Rockets & Satellites Mar 29 2020 The trail to find Osama bin Laden was uncovered by human and satellite intelligence, and the raid that killed him was directed by a fleet of intelligence-collecting satellites over Pakistan. Even though we can't see them, satellites play a large role in reconnaissance and defense support. Students will learn about the rockets that launch satellites, how satellites are used, and how the

military uses secret space planes and test vehicles that are ready to spy from space or engage in any possible space wars. Full color photos, fact boxes, and comprehensive coverage of the history of the US satellite program fill out this timely title.

Neurotechnology Dec 26 2019 New technologies that allow us to investigate mechanisms and functions of the brain have shown considerable promise in treating brain disease and injury. These emerging technologies also provide a means to assess and manipulate human consciousness, cognitions, emotions, and behaviors, bringing with them the potential to transform society. Neurotechnology: Premises, Potential, and Problems explores the technical, moral, legal, and sociopolitical issues that arise in and from today's applications of neuroscience and technology and discusses their implications for the future. Some of the issues raised in this thought-provoking volume include: Neurotechnology in education: an enablement, a treatment, or an enhancement? The potential and limitations of neuroimaging technology in determining patient prognoses Tissue implantation technology as a way of engendering personalized medicine Neuroprostheses: restoration of functions of the disabled vs. enhancement to transhuman capabilities Deep brain stimulation and its use in restoring, preserving, or changing patients' personal identity The benefit and risk of cognitive performance tools Cyborg technology and its potential to change our vision of humanity Methodologies for reducing the risk of neurotechnology's impact on ethical, legal, and social issues With contributions from an international group of experts working on the cutting edge of neurotechnology, this volume lays the groundwork to appreciate the ethical, legal, and social aspects of the science in ways that keep pace with this rapidly progressing field.

Debating European Security and Defense Policy

Jun 12 2021 Dr. Larivé questions whether there is such a thing as a European defense and security policy. This book analyzes the integration process by clearly illustrating to the reader the two sides of the argument in order to understand the complexity of the problems in the different stages of the creation and implementation of the European defense policy. In doing so, this study asks the question of why has the process been so halting and of such limited scope? Structured in three parts: Theories, analyzing the theoretical debates raised by the positivist paradigms of neorealism, liberalism and constructivism on European security; History, reflecting on the impacts of the Cold War, American foreign policy, the 2008 economic crisis, and the evolution of European strategy; and, Actors, by looking at the role of European institutions, Member States, and the CSDP on the transformation of the European defense policy since 1998. Each chapter is composed of sub questions allowing the reader to grasp the different forces explaining the deepening or lack of the deepening process of the CSDP. Ultimately, this book offers a unique base for fostering discussion, understanding and critical thinking on the CSDP.

The European Security and Defense Policy Sep 15 2021 The emergence of the European Security and Defense Policy (ESDP) in the last two-thirds of the 1990s and continuing into the new century, has been a complex process intertwining politics, economics, national cultures, and numerous institutions. This book provides an essential background for understanding how security issues as between NATO and the European Union are being posed for the early part of the 21st century, including the new circumstances following the terrorist attacks in New York and Washington on September 11, 2001. This study should be of interest to those interested in the evolution of U.S.-European relations, especially in, but not limited to, the security field; the development of

institutional relationships; and key choices that lie ahead in regard to these critical arrangements.

US Defense Politics Nov 17 2021 This new textbook seeks to explain how US defense and national security policy is formulated and conducted. The focus is on the role of the President, Congress, political partisans, defense industries, lobbies, science, the media, and interest groups, including the military itself, in shaping policies. It examines the following key themes: US grand strategy; who joins America's military; how and why weapons are bought; the management of defense; public attitudes toward the military and casualties; the roles of the President and the Congress in controlling the military; the effects of 9/11 on security policy, homeland security, government reorganizations, and intra- and inter-service relations. The book shows how political and organizational interests determine US defense policy, and warns against the introduction of centralising reforms. In emphasizing the process of defense policy-making, rather than just the outcomes of that process, this book signals a departure from the style of many existing textbooks.

Neurotechnology in National Security and Defense Jun 24 2022 Neurotechnology in National Security and Defense: Practical Considerations, Neuroethical Concerns is the second volume in the Advances in Neurotechnology series. It specifically addresses the neuroethical, legal, and social issues arising from the use of neurotechnology in national security and defense agendas and applications. Of particular concern are the use of various neurotechnologies in military and intelligence operations training, acquisition of neurobiological and cognitive data for intelligence and security, military medical operations, warfighter performance augmentation, and weaponization of neuroscience and neurotechnology. The

contributors discuss the neuroethical questions and problems that these applications generate as well as potential solutions that may be required and developed. The book examines how developments in neurotechnology in national security and defense agendas are impacted by and affect ethical values and constructs, legal considerations, and overall conduct of the social sphere. Presenting an integrative perspective, leading international experts lay the scientific groundwork and establish the premises necessary to appreciate the ethical aspects of neurotechnology in national security and defense. It is not a question of "if" neurotechnology will be used in such ways, but when, how, and to what extent. Therefore, it is imperative to foster a deeper understanding of neurotechnology, the problems and debates arising from its use in national security and defense, and how such issues can and should be addressed. In doing so, we can guide and govern the use of these innovative neurotechnologies in ways that uphold ethical accountability.

New Developments in Surveillance Systems and National Security Feb 20 2022

European Security and Defence Policy Aug 02 2020 Security and defence is the area in which the EU has advanced most in recent years. A principal element of this process is the proliferating number of military and civilian crisis management missions in Europe, the Middle East, Africa and Asia. Clearly, Europe

has come a long way since the disappointments and frustration in the 1990s, when, in light of the violent disintegration of Yugoslavia, analysts argued that the EU foreign and security policy was 'neither common, nor foreign, nor dealing with security, nor (could) be called a policy.' Since then the newly developed European Security and Defence Policy (ESDP) has become the necessary framework for the formulation and implementation of effective European security policy. This book is the first-ever in-depth inquiry of the ESDP in action. It analyzes the implementation of military and civilian missions in the Balkans, Southern Caucasus, Africa and Asia and asks what impact they have on the ground. The EUJUST Themis in Georgia, the Aceh Monitoring Mission in Indonesia as well as EUSEC-R.D. Congo and EUPOL Kinshasa are examined in The European Security and Defence Policy will be of interest to students and scholars of international relations, security, European studies, foreign policy, peacekeeping and

transatlantic relations.

Security and Defence in Europe Dec 06 2020

This book argues that security and defense have never been true priorities in the European Union, and have constantly been marginalized by the elites since the Soviet Union collapsed and the Warsaw Pact disintegrated. Despite the official rhetoric, only a few tangible results can be presented concerning the operational readiness of European forces, and the EU's inability to act was proven during the crises in the Balkans, NATO has experienced similar problems, as the majority of its members are EU countries. Both organizations have declared their resolve concerning the security and defense of their nations and territories, but, unfortunately, little has been done to lend these statements credence. In this context, the book analyzes several aspects of EU security and defense, including: the EU – NATO relationship, common defense policy and strategy, common capability building, common understanding of strategic changes, common operational planning and centrally synchronized exercises based on

operational planning, etc. The member states have helped to make EU/NATO effective organizations, but unfortunately their individual interests and priorities constitute real challenges. This aspect should be discussed and addressed by political and military elites, scholars, analysts, students and the general public alike.
