*Creating Germans Abroad* Oct 11 2020 When World War I brought an end to German colonial rule in Namibia, much of the German population stayed on. The German community, which had managed to deal with colonial administration, faced new challenges when the region became a South African mandate under the League of Nations in 1919. One of these was the issue of Germanness, which ultimately resulted in public conversations and expressions of identity. In *Creating Germans Abroad*, Daniel Walther examines this discourse and provides striking new insights into the character of the German populace in both Germany and its former colony, Southwest Africa, known today as Namibia. In

addition to German colonialism, Walther considers issues of race, class, and gender and the activities of minority groups. He offers new perspectives on German cultural and national identity during the Empire, the Weimar Republic, and the Third Reich. In a larger context, *Creating Germans Abroad* acts as a model for investigating the strategies and motivations of groups and individuals engaged in national or ethnic engineering and demonstrates how unforeseen circumstances can affect the nature and outcome of these endeavors.

**Care Work and Care Jobs for the Future of Decent Work** Jul 20 2021 The report analyses the ways in which unpaid care work is recognised and organised, the extent and quality of care jobs and their impact on the well-being of individuals and society. A key focus of this report is the persistent gender inequalities in

households and the labour market, which are inextricably linked with care work. These gender inequalities must be overcome to make care work decent and to ensure a future of decent work for both women and men. The report contains a wealth of original data drawn from over 90 countries and details transformative policy measures in five main areas: care, macroeconomics, labour, social protection and migration. It also presents projections on the potential for decent care job creation offered by remedying current care work deficits and meeting the related targets of the Sustainable Development Goals.

**Engineering** Jan 02 2020 This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.--Publisher's description.

**Rethinking Career Studies** May 18 2021 Careers are studied across many disciplines - particularly from the social sciences - but there is little conversation between them. Many scholars are studying the same thing in different ways, too often missing opportunities to learn from one another and draw on each other's ideas and findings to enrich their own. Gunz and Mayrhofer bridge these scholarly discourses as they explore the meaning of 'career' and answer the question: What is it that career scholars do when they study careers? The framework that emerges from this answer - the Social Chronology Framework (SCF) - vitally facilitates valuable conversations between scholars in different intellectual traditions. Building on the SCF framework, this comprehensive introduction to career studies encourages students, researchers and practitioners to identify commonalities between the topics they are studying and those examined in other fields, such as organization studies, drawing together interdisciplinary insights into career outcomes and their influencing factors.

[The Labor Market for Health Workers in Africa](#) Jun 26 2019 Sub-Saharan Africa has only 12 percent of the global population, yet this region accounts for 50 percent of child deaths, more than 60 percent of maternal deaths, 85 percent of malaria cases, and close to 67 percent of people living with HIV. Sub-Saharan Africa, however, has the lowest number of health

workers in the world-significantly fewer than in South Asia, which is at a comparable level of economic development. The Labor Market for Health Workers in Africa uses the analytical tools of labor markets to examine the human resource crisis in health from an economic perspective. Africa's labor markets are complex, with resources coming from governments, donors, the private sector, and households. Low numbers of health workers and poor understanding of labor market dynamics are major impediments to improving health service delivery. Yet some countries in the region have developed innovative solutions with new approaches to creating a robust health workforce that can respond to the continent's health challenges. As Africa grows economically, the invaluable lessons in this book can help build tomorrow's African health systems.

**Comparative Law and Anthropology** Oct 30 2019 The topical chapters in this cutting-edge collection at the intersection of comparative law and anthropology explore the mutually enriching insights and outlooks of the two fields.

Comparative Law and Anthropology adopts a foundational approach to social and cultural issues and their resolution, rather than relying on unified paradigms of research or unified objects of study. Taken together, the contributions extend long-developing trends from legal anthropology to an anthropology of law and from externally imposed to internally generated interpretations of norms and processes of legal significance within particular

cultures. The book's expansive conceptualization of comparative law encompasses not only its traditional geographical orientation, but also historical and jurisprudential dimensions. It is also noteworthy in blending the expertise of long-established, acclaimed scholars with new voices from a range of disciplines and backgrounds.
